

Name : Shalimar Moong 1  
 Notification No : 1117(E),dated: 25-08-2005

Parentage	:	Selection from Jalgoan Mungbean
Breeding Methodology adopted	:	Single Plant Selection(SPS)
Maturity	:	105-115 days
Grain Type	:	Spherical
Biotic Stress	:	Resistant to leaf spot & pod blight
Abiotic Stress	:	Tolerant to moisture stress
Recommended regions	:	NW Himalayan region
Areas of adoption	:	Plains and hills of valley at altitude of 1650 m amsl.
Special attributes	:	Good cooking quality & protein content-23%
Average yield	:	7-8 Q/ha
Seed Rate	:	20 kg/ha
Recommended Fertilizer Dosage	:	N:P:K@30:50:30
Precautions to be followed	:	For higher yield of seed crop, adequate plant population, good soil moisture and weed free crop is essential
Principal Breeder	:	Principal Breeder
Level of Adoption	:	15%
