

**Name** : Shalimar French Bean-1 (Farash Bean)  
**Notification No** : 1117(E),dated: 25-08-2005

Parentage	:	HOS-9
Breeding Methodology adopted	:	Single plant selection
Maturity	:	55-66(Green pods)
Grain Type	:	Kidney shaped
Biotic Stress	:	Moderately resistant to BCMV
Abiotic Stress	:	Tolerant to moisture stress
Recommended regions	:	NW Himalayan region
Areas of adoption	:	Plains and hills of valley at altitude of 1650 m amsl.
Special attributes	:	Good cooking quality & early maturing,
Average yield	:	50 Q/ha pod yield
Seed Rate	:	60 kg/ha
Recommended Fertilizer Dosage	:	N:P:K@30:60:40
Precautions to be followed	:	For higher yield of seed crop, adequate plant population, good soil moisture and weed free crop is essential
Principal Breeder	:	
Level of Adoption	:	10%
